SUMMARY

Flutter and React.js developer with 2+ years of professional experience shipping production apps at a Nepali software company. Built and delivered a full logistics app, integrated eSewa payments, and implemented FCM push notifications in live products. Strong in BLoC, Redux, Firebase, Firestore, and offline-first mobile architecture. Driven by the belief that great software should work for everyone, including users in Nepal.

EXPERIENCE

Software Developer (Flutter & React.js)

Oct 2024 – Feb 2026

Kutumba Tech Pvt. Ltd., Kathmandu, Nepal

- Owned end-to-end Flutter and React.js feature development across multiple production apps with modular, scalable architecture.
- Built a full **logistics and delivery app** in Flutter — covering order tracking, route management, and real-time status updates.
- Integrated **eSewa payment gateway** into a Flutter app, handling SDK setup, transaction verification, and error flows.
- Integrated REST APIs and built secure auth flows using Firebase Authentication and Firestore.
- Used BLoC for Flutter state management and Redux for React.js, keeping complex app state predictable and maintainable.
- Improved app rendering performance and built pixel-perfect responsive UIs across Android and web.

Flutter Developer Intern

Dec 2023 – Sep 2024

Kutumba Tech Pvt. Ltd., Kathmandu, Nepal

- Contributed Flutter modules to live production apps from the first month of the internship.
- Implemented Firebase Authentication and RESTful API integrations for core app features.
- Built reusable widget components and responsive layouts that reduced UI duplication across the codebase.
- Participated in code reviews and agile sprints, consistently meeting sprint delivery targets.

EDUCATION

Bachelor in Computer Applications (BCA)

2020–2025

Hetauda School of Management and Social Science, Nepal

TECHNOLOGIES

Languages: Dart, JavaScript, SQL

Mobile: Flutter, BLoC, Firebase, Firestore, FCM, eSewa SDK, REST APIs, Offline-first Architecture

Frontend: React.js, Redux, Next.js, Tailwind CSS

Tools: Git, GitHub, Figma, Postman

KEY PROJECTS

Sajilo Khata – Personal Finance Tracker

2026

- Flutter app that silently parses bank SMS to auto-log income and expenses – zero manual entry.
- Built custom SMS parsers for **NIMB, NIC Asia, ADB, and Nabil Bank**, handling each bank's unique message format.
- Features spending charts, savings goals with progress tracking, manual entry/editing, and cloud sync via **Firestore**.
- Implemented **FCM push notifications** for spending alerts and savings goal milestones.
- Offline-first architecture ensures full functionality without internet; data syncs when connection is restored.
- Launched April 2026 – actively adding BS/AD calendar support, AI spending insights, and more bank integrations.

Streamly – Movie Platform

2024

- Built with **Next.js** and TMDB API; gained **1,000+ monthly visits, 26 GitHub stars**, and **7 forks** organically.
- Implemented real-time data fetching, dynamic routing, and a personalized browsing experience.
- Link: <https://movies.gambhirpoudel.com.np>

Nepali Calendar Kit

2026

- Published npm package for Bikram Sambat date conversion and a reusable Nepali Date Picker component.
- Averaging **4–6 downloads per week** from developers integrating Nepali calendar support into web apps.
- Designed with a clean API and full documentation for easy adoption.

HACKATHONS

Food Waste Management System

Dec 2023

Boston International College Hackathon

- Built a full-stack web platform to automate food waste tracking with a Node.js + PostgreSQL backend.
- Delivered a real-time analytics dashboard within the 48-hour hackathon window.

MediServ – Healthcare UI Prototype

2023

HSM IT Club Hackathon

2nd Place – UI/UX Design

- Designed a healthcare service prototype in Figma, winning 2nd place in the UI/UX category.
